NEC MultiSync® P463

The slimmer, lighter MultiSync® P463 is packed with additional features that make it the ideal professional choice for any 24/7 Retail, Transportation, Corporate or Control Room applications that demand trusted performance, flexibility and lower costs of operation.

New Connectivity and Sensors allow additional creativity in the content displayed and how it is controlled. The unique built-in NFC sensor in combination with NEC's new Android app reduces installation and maintenance times, especially useful on larger installations. The Human Sensor is aware of proximity based viewer presence and can change brightness, volume, inputs or power the display up or down resulting in added engagement and considerable energy savings over time.

OUTSTANDING PERFORMANCE

- **Reduce Installation and Operating Costs.** The combination of LED back lights, Intelligent Wireless Data (NFC), programmable Ambient Light Sensor and (optional) OPS Slot-in PCs delivers the lowest installation and operating cost of any public display on the market.

- **Intelligent Wireless Data (based on NFC).** The built-in near field communication (NFC) chip allows data to be read and written with a mobile phone or tablet PC. Using the NEC Android app the user can pre-configure the display e.g. LAN settings, language etc. by holding an NFC capable device close to the display. All data will be transferred to the screen without the display needing power. This reduces set up and installation time and cost.

- **Human Sensor.** Save on power and reduce operating cost when the display operates at a very low brightness level and only switches to a higher brightness when a person is nearby. This optional feature can also be used for creative signage to e.g. switch inputs automatically to change from entertainment to information when a person approaches the screen.

- **Interface Extension.** This slot offers unique flexibility for additional connections with the choice of adding a single digital or two analogue boards.
