

Lightning to USB ChargeSync Cable

Overview

Charge and Sync at the Speed of Lightning

Use the 4-foot Lightning to USB cable to charge your iPhone 5, iPod touch (5th generation) iPad with Retina Display (4th generation), or iPad mini at the fastest possible speed. The smaller, more durable Lightning connector is also reversible, which makes plugging it in easier than ever.

Plug it into your laptop to charge and sync, or use your own wall/car charger with USB port to charge from anywhere. Great as a replacement cable or if you simply need an extra.

The MIXIT⁺ Collection

Mix it up with chargers, cables, audio, and power accessories that come in a full line of high-tech hues.
