\Orchestrating a brighter world

NEC

NEC Large Format Touch LCD Displays

MultiSync[®] V554-T / V484-T / V404-T

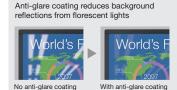

Impressive touch solutions have never been easier to create.

Drive your ambition beyond the limits of a passive video wall to achieve high-performance multi-touch capabilities with the NEC touch system.

Highlights

An Attractive Screen that is Scratch Resistant and Limits Background Reflections from External Light

The screen employs a one-sided anti-glare coating with smooth finger-sliding and a 4.0-mm thick glass to protect from scratches and impacts. Furthermore, the high luminance of 440 cd/m² provides a readable display even in bright locations.

*Example i

Modern and Slim Design

The new elegant slim design provides unobtrusive integration into any application and environment. The simplicity of its shape supports an unhindered viewing experience ensuring that the screen content is the prevalent factor. Its reduced depth means that access to buildings and integration within interior design is straightforward and hassle-free.

Out of the Box Signage Solution

The integrated media player supports easy content playback and management for out-of-the box signage solutions that could not be simpler. Content can be transferred through the USB interface or a network connection.

Up to 10-point Multi-touch Gesture Support Allows Operations from Multiple Users

The display employs an infrared touch panel that allows multiple inputs,

so it can be used by multiple users. The display can even be used while wearing gloves. 'An application that supports multiple inputs is required.

Smart Expansion

A modular open platform approach is the smartest way to deliver tailor-made signage solutions, where scalable computing power such as Raspberry Pi compute modules or OPS* slot-in PCs are seamlessly embedded into the display.

* OPS is a standard established by Intel Corporation.

Compute module Requires the optional interface kit

SpectraView[®] Engine Precisely Recreates Colours with High Precision

The display can reproduce colours more accurately because it is equipped with a 3D lookup table and unique colour conversion algorithm through its dedicated image processing. Various colour gamuts can be expressed precisely according to sRGB and other industry standards without calibration of each image-quality setting. In addition, display settings designed for different applications are preset at the factory as "Picture Mode" settings, so you can use a setting quickly by selecting it from the menu.

3D lookup table

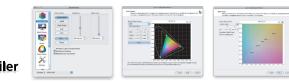

Support for MultiProfiler® Software to Easily Realize Various Emulation Functions

The display supports MultiProfiler[®], NEC's unique application software. Applying an ICC profile* to the display easily enables advanced colour reproduction, and you can also create and save ICC profiles for displays that require colour management.

* ICC profile: A file established by the International Color Consortium (ICC)

that lists the colour gamut of the device to determine how a specific device reproduces colour. Files can be created for three main device types: displays, input devices (digital cameras, scanners, etc.) and output devices (printers, etc.).

Human Sensor and Advanced Auto Dimming

brightness, audio and source inputs while saving on operating costs. Built-in auto dimming adjusts

the backlight of the LCD automatically depending

This optional human (motion) sensor accessory (KT-RC2) helps to deliver

creative digital signage to end users by allowing for dynamic control of

Advanced Heat Management

Monitoring and managing the temperature of each display is crucial to secure reliability and longevity.

An industrial-strength, premium-grade panel with additional thermal protection, internal temperature sensors with self-diagnostics, and fan-based technology allow for 24/7 operation and protect your display investment.

Intelligent Wireless Data Function

The built-in near field communication (NFC) chip allows data to be read and written via a mobile phone or tablet PC. Users can significantly reduce installation costs as displays can be easily configured and

serviced using the NEC NFC Android app. This is available even when the display is switched off and is especially useful on larger installations.

HDBaseT Support*

Simplify your installations with HDBaseT, which is optimized for video applications and supports uncompressed Full-HD digital video, audio, Ethernet, and various control signals. With only a single cable (up to 100 m) to run, infrastructure and labour costs are reduced, installations are significantly easier, and there is no cable clutter to manage. With uncompressed HD video support, images have never been more

stunning. What's more, control signals are contained in the same cable. * Requires the optional HDBaseT board, SB-07BC

Proof of Play

This function provides accurate proof that displays are working as established and is helpful when checking on the status of the displays installed at a user's site.

Other Useful Features and Functions

- Landscape/portrait capable
- Scheduler with real-time clock
- Intelligent power management system
- Power-on delay
- Screen saver function
- Aspect ratio control
- Memo function
- Carbon footprint meter
- · Image and on-screen display flip
- Picture-in-picture, picture-out-picture
- · Built in speakers
- Point zoom
- Control lock function
- 6-axis colour adjustments and sRGB standard
- Advanced video settings (Noise reduction, adaptive contrast)
- Colour temperature adjustment
- Programmable gamma setting (3 settings)
- DICOM simulation

- Plug and play (DDC/CI, DDC2B)
- HDCP (High-bandwidth Digital Content Protection)
- Ethernet and RS-232C control and
- communication ● CRESTRON ROOMVIEW[™]
- AMX Discovery HTTP server
- PJLink
- Self-diagnosis

* NEC Display Wall Calibrator

- Firmware update over LAN
- Rear metal cabinet with VESA Standard (FDMIv1) Mounting Interface

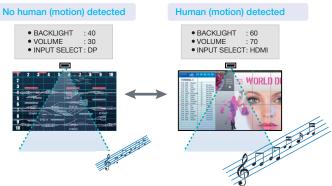

MultiSync[®] V554-T / V484-T / V404-T

Practical example

on the amount of ambient light.

NaViSet® Administrator 2

This software is an all-in-one remote support solution that runs from a central location and provides monitoring, asset management and control of the majority of NEC display devices and Windows computers. It is ideal for multi-device installations over larger infrastructures.

Dedicated Colour Calibration Software*

As the brightness and colour temperature of the LCD change with time, colours may not match across multiple screens. Our dedicated colour

calibration software ensures colour uniformity and fidelity across multiple

screens, creating a perfectly matched image in tiled environments.
